

GCB BANK  
PERFORMANCE &  
RATIONALISATION  
ASSESSMENT -  
FY 2024

42 Branches  
January 2024 – December 2024

High default rates are heavily concentrated in Axim (Western), Damongo (Savannah), and Kintampo (Bono East), with all having full-year default rates exceeding 23%.

Tamale Central and Bolgatanga show the worst efficiency profile: low transactions but high cost per transaction exceeding GHS 65

CREDIT RISK AND  
REGIONAL LIQUIDITY

Capital generation is heavily centralized. Greater Accra (~GHS 44.1M) and Ashanti Region (~GHS 33.9M) drive the vast majority of net positive deposits.

Nkawkaw (Eastern) and Bolgatanga (Upper East) maintain the weakest net deposit positions, meaning money is flowing out almost as fast as it is coming in.

OPERATIONAL EFFICIENCY  
& CUSTOMER EXPERIENCE

The data reveals that customer complaint spikes do **not** perfectly correlate with low staff counts; instead, they correlate with **high transaction volatility months** where existing staffing levels failed to adapt, causing operational bottlenecks.

New account openings declined 33% over FY2024, with the steepest drop between March and June, suggesting weakening customer acquisition momentum across the network.
